

Beacon FR

Mental-health protection for first responders

Beacon FR

Wellbeing protection built for law enforcement, fire, EMS, and dispatch

Open Feed Network, Inc. · candortrustandsafety.com *Every claim below maps to a dated behavioral proof in the public evidence record.*

The problem

First responders carry cumulative exposure to trauma inside a culture where asking for help can feel career-ending. General-purpose crisis detection fails this population badly: gallows humor reads as ideation, and professional minimization reads as low risk when it may mask real distress. And any system that generates false alerts erodes trust immediately — responders simply stop posting.

What Beacon FR does

Beacon FR adapts Beacon’s wellbeing approach to first-responder organizations, oriented around early support, confidentiality, and career safety. It is not a surveillance tool; it is a peer-support force multiplier that surfaces signals colleagues might miss and routes them through career-safe channels to people who understand the job — never to a chain of command, and never generating discipline-facing reports.

How it works, in principle

Detection is **calibrated per profession**, so the extreme gallows humor and minimization that are cultural norms are read correctly rather than pathologized. When a genuine signal crosses the threshold, a configured **peer support officer** is alerted with context — never the raw content — and the person receives a private, peer-voice message with first-responder-specific resources. Colleagues can raise concern about a peer through a channel that **protects the flagger’s identity**, enabling the “buddy check” without social risk. Beacon FR follows the same **fail-loud** rule as Beacon: an analyzer failure is surfaced as a failure, never a fake all-clear. *Detection profiles and internal signals are not published.*

Verified behaviors

- **Occupational distress is detected and the peer support officer is alerted** with context, not raw content. *Verified July 2, 2026.*
- **The response message is career-safe, in peer voice, with first-responder-specific resources.** *Verified July 2, 2026.*
- **Analyzer failure fails loud** — surfaced as “system failure, not safe,” never a fake all-clear. *Verified July 2, 2026.*

Honest limitations

Beacon FR complements — never replaces — clinical care, peer support teams, and EAP structures, and succeeds only with genuine confidentiality guarantees in deployment.
